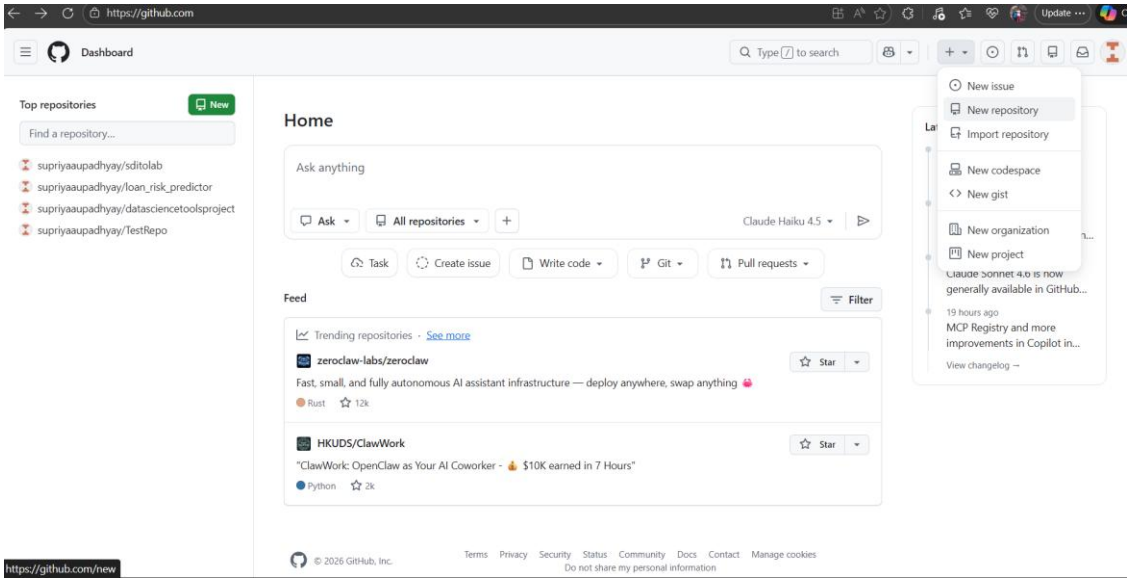
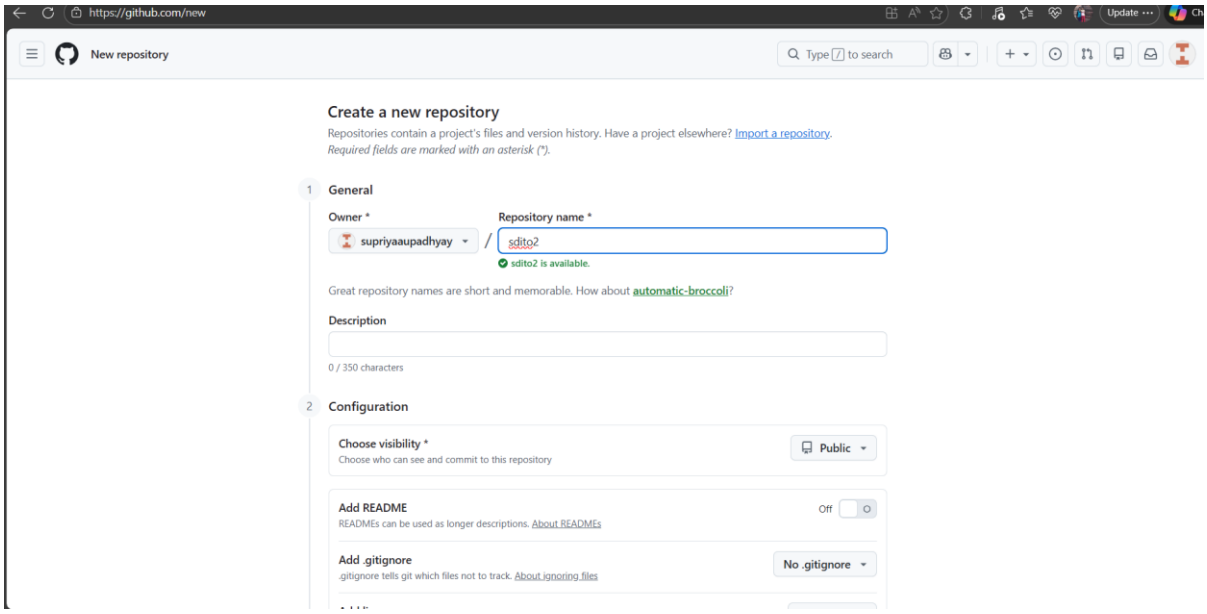
Assignment : 8

Deploy a project from a local machine to GitHub and vice-versa.

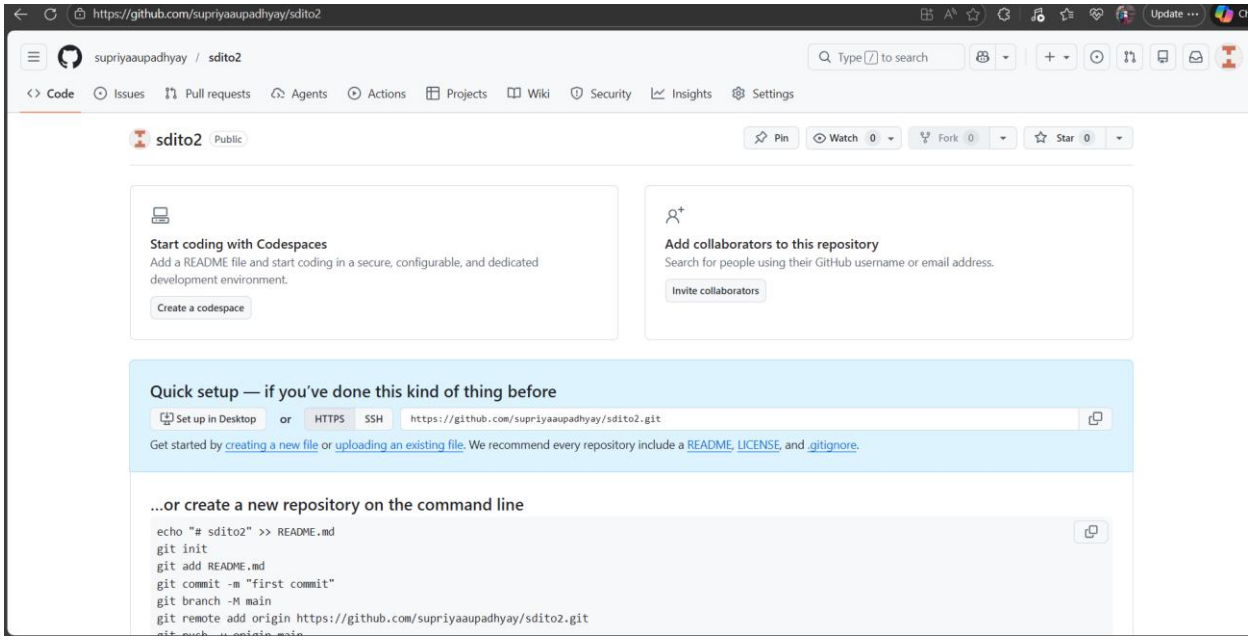
Step 1 : Go to GitHub. Click the "+" sign (top right) → New repository.



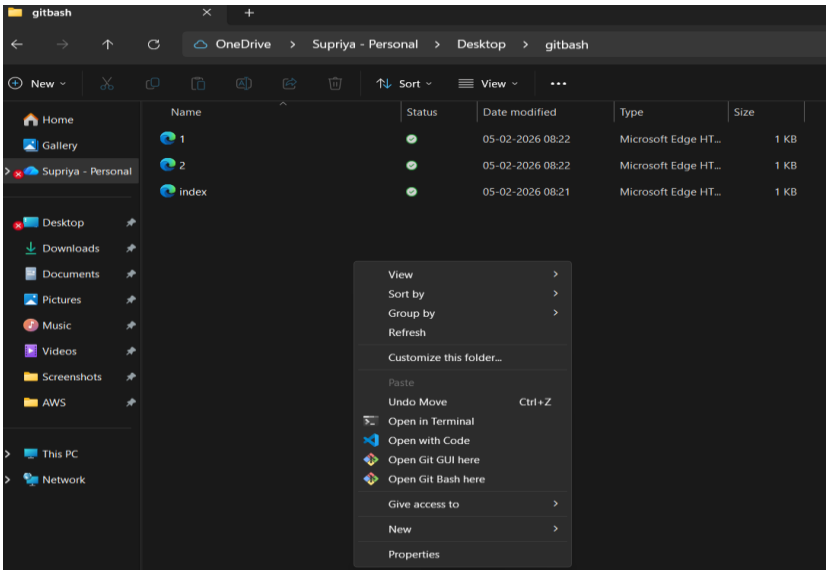
Step 2: Enter a repository name, choose public/private, and click Create repository.



Step3: Copy the repository URL (e.g., https://github.com/username/repository.git).



Step 4: Open a new folder with files in it then right click on the inside the folder and do Git Bash.



Step 5: Initialize a Git repository: using command “git init”.

Step 6: Add all project files to Git: using command “git add”.

Step 7: set your GitHub username and your email (use the email linked to GitHub): using commands: git config --global user.name "YourGitHubUsername” & git confi g--global user.email “youremail@example.com” .

```
upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/gitbash (main)
$ git config --global user.email "upadhyaysupriya1812@gmail.com"

upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/gitbash (main)
$ git config --global user.name "supriyaaupadhyay"

upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/gitbash (main)
$
```

Step 8: Commit the files with a message: using command “git commit-m "Initial commit".

```
upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/gitbash (main)
$ git commit -m "First commit"
[main (root-commit) f6a417d] First commit
 3 files changed, 42 insertions(+)
 create mode 100644 1.html
 create mode 100644 2.html
 create mode 100644 index.html

upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/gitbash (main)
$
```

Step 9: Add the GitHub repository URL: using command “git remote add origin ...”.

```
upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/gitbash (main)
$ git remote add origin https://github.com/supriyaaupadhyay/sdito2.git

upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/gitbash (main)
$
```

Step 10: Push the files to GitHub: using commands “git branch-M main” & “git push-u origin main”.

```
upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/gitbash (main)
$ git branch -M main

upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/gitbash (main)
$ git push -u origin main

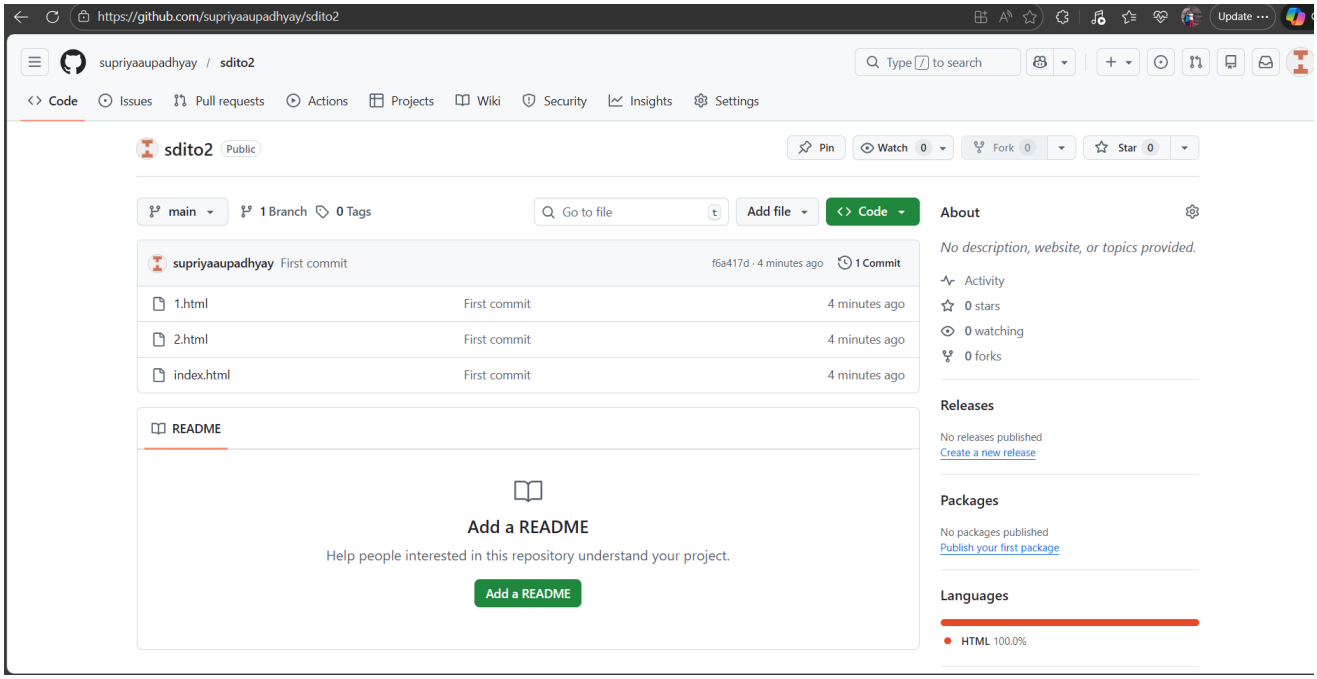
 * [new branch]      main -> main
branch 'main' set up to track 'origin/main'.

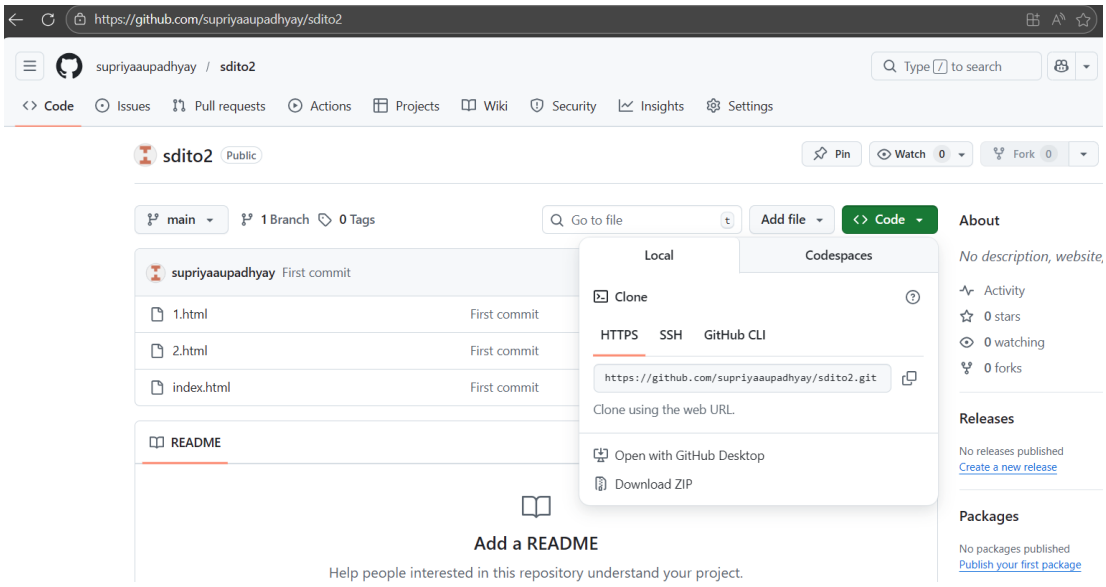
upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/gitbash (main)
$
```

Step 11: Refresh your repository page on GitHub to see the uploaded project.

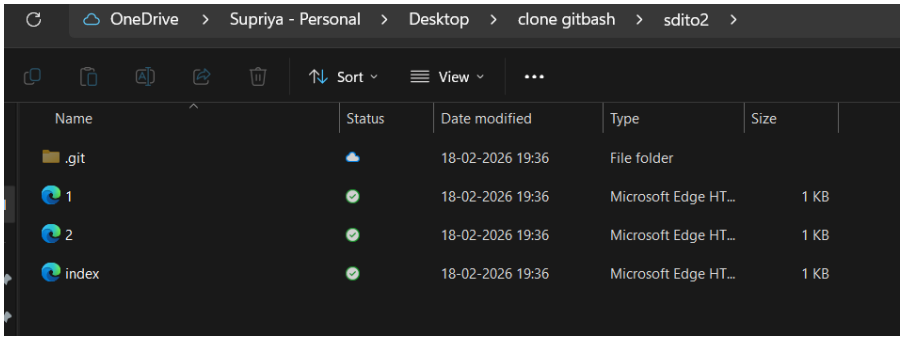


Cloning a GitHub Repository to Local Machine:

Step 1: Go to the GitHub repository you want to clone. Click the Code button and copy the HTTPS or SSH URL.



Step 2: Navigate to the directory where you want to store the project. Clone the repository: using the command "git clone ..."

Step 3: Now check the files of the github repo that are cloned in Local Folder.


```
upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/clone gitbash
$ ls
sdito2/

upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/clone gitbash
$ cd sdito2

upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/clone gitbash/sdito2 (main)
$ ls
1.html  2.html  index.html

upadh@BangbangPo MINGW64 ~/OneDrive/Desktop/clone gitbash/sdito2 (main)
$
